

Library Management System

Made By – MD. Minarul Islam, Swarnali Chatterjee, Saurabh Pramanik, Brajesh Kumar Jha
Group – H

INTRODUCTION

- ✱ A library management system, also known as an automated library system is software that has been developed to handle basic housekeeping functions of a library.

- ✱ It's a well organized software solution for a library.

- ✱ It help to provide information on any book present in library to the user as well as staff member.

It keeps a track of book issued, returned and added to library.

SCOPE OF PROJECT:

- ✿ To make the existing system more efficient.
- ✿ To provide a user friendly environment where user can be serviced better.
- ✿ Make functioning of library faster.
- ✿ Provide a system where the library staff can catch defaulters and not let them escape.
- ✿ To minimize the loss done to books.

REQUIREMENTS:

- ✱ The Library Management System shall be required to maintain information about its users and books.
- ✱ It shall store databases for students, teachers and books.
- ✱ The student database stores information about a student's roll no, name, address, course and year.
- ✱ The book database stores information about a book title, author, publisher, cost, bill number, year of publishing and pages.
- ✱ The teacher database stores information about a teacher's id, name, department, designation, address and telephone number.

PROJECT AIM AND OBJECTIVE

- ✿ To eliminate the paper work in library.
- ✿ To record every transaction in computerized system so that problem such as record file missing won't be happen.
- ✿ To design a user friendly graphical user interface which suit the user.
- ✿ To save the cost and time.

TASK OF LIBRARIAN

- Log In
- Add New Member
- Update/Delete Member
- Add a Book
- Update/Delete Book
- Search For a Book
- Check In Book
- Check Out Book
- Pay Late Fee
- View Book Detail
- View Member Detail
- Search For a Member

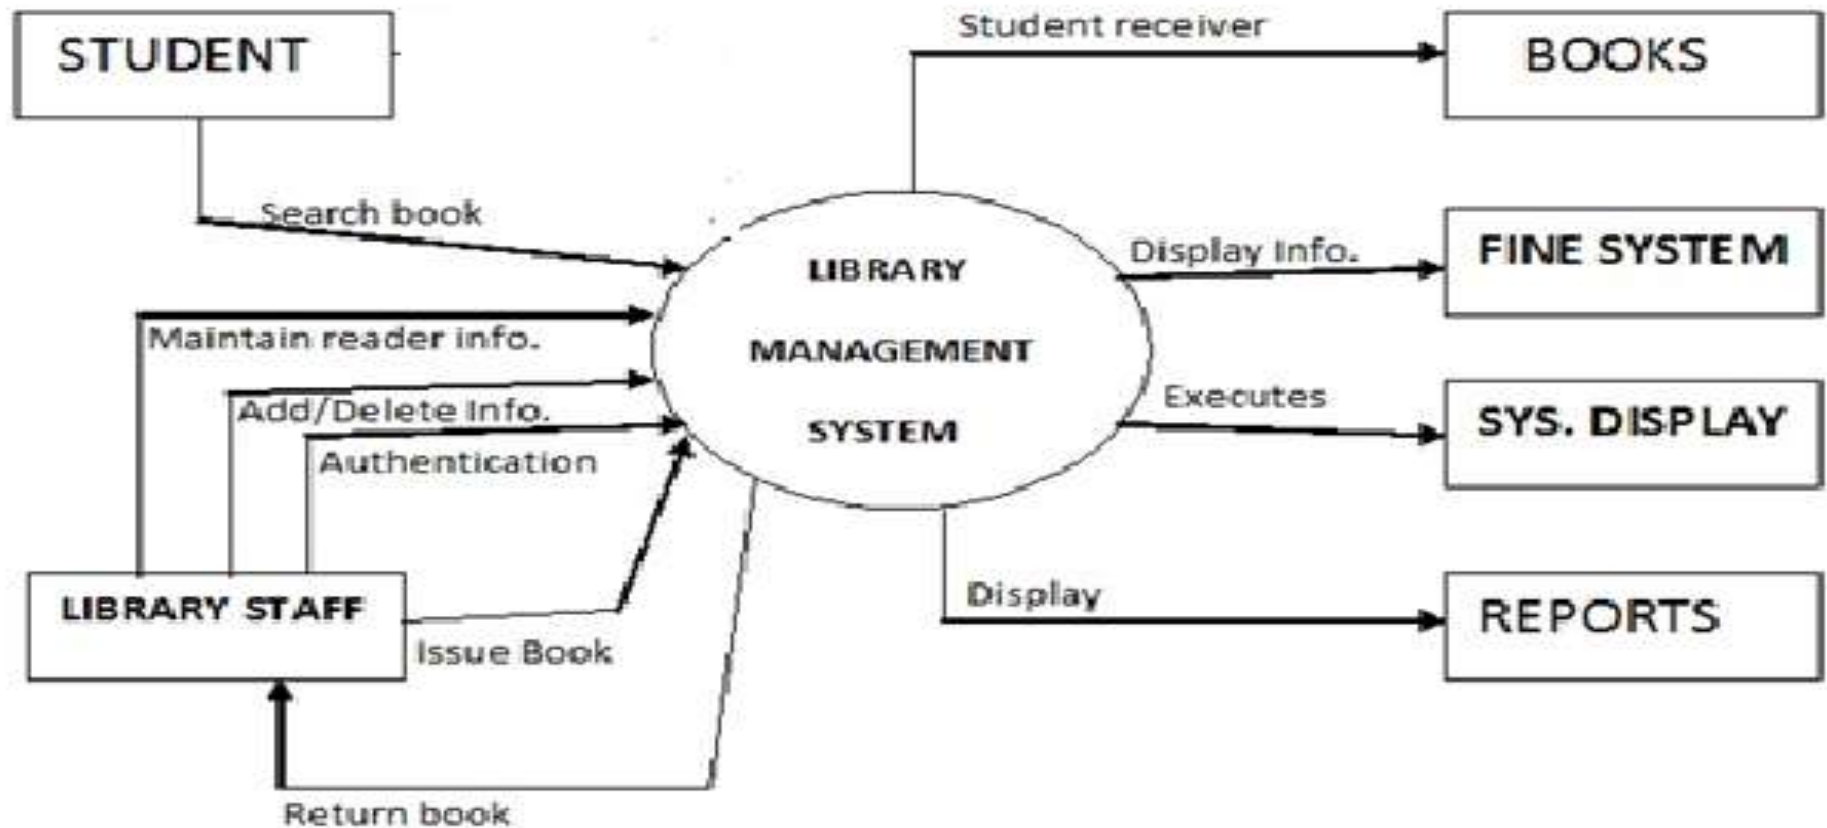

DATA FLOW DIAGRAM

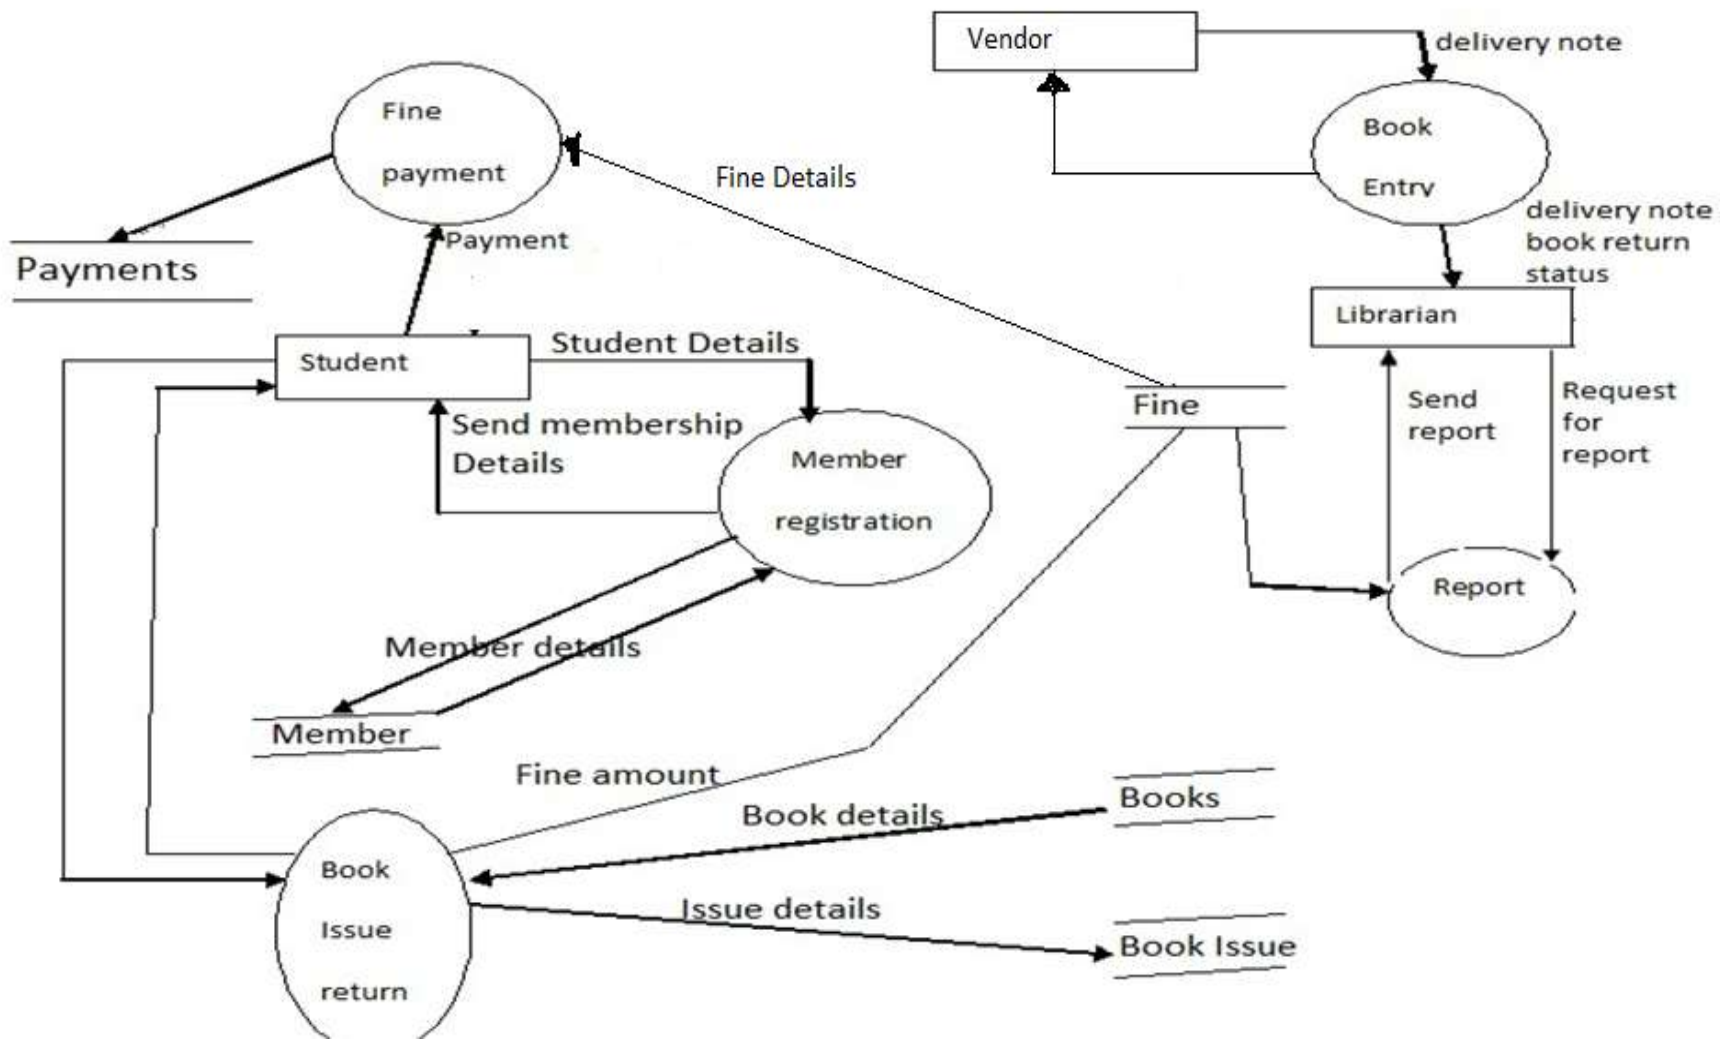

- ✱ A data flow diagram(DFD) is graphical representation of the “flow” of data through an information system.
- ✱ A DFD shows what kinds of information will be input to and output from the system.
- ✱ One of the most widely used system analysis process models is the data flow diagram.

SYSTEM CONFIGURATION

1.HARDWARE CONFUGRATION:-

- PROCESSOR : PENTIUM IV 3.0 GHz
- MEMORY : 256 MB RAM
- HARD DISK : 40GB

2.SOFTWARE CONFUGRATION:-

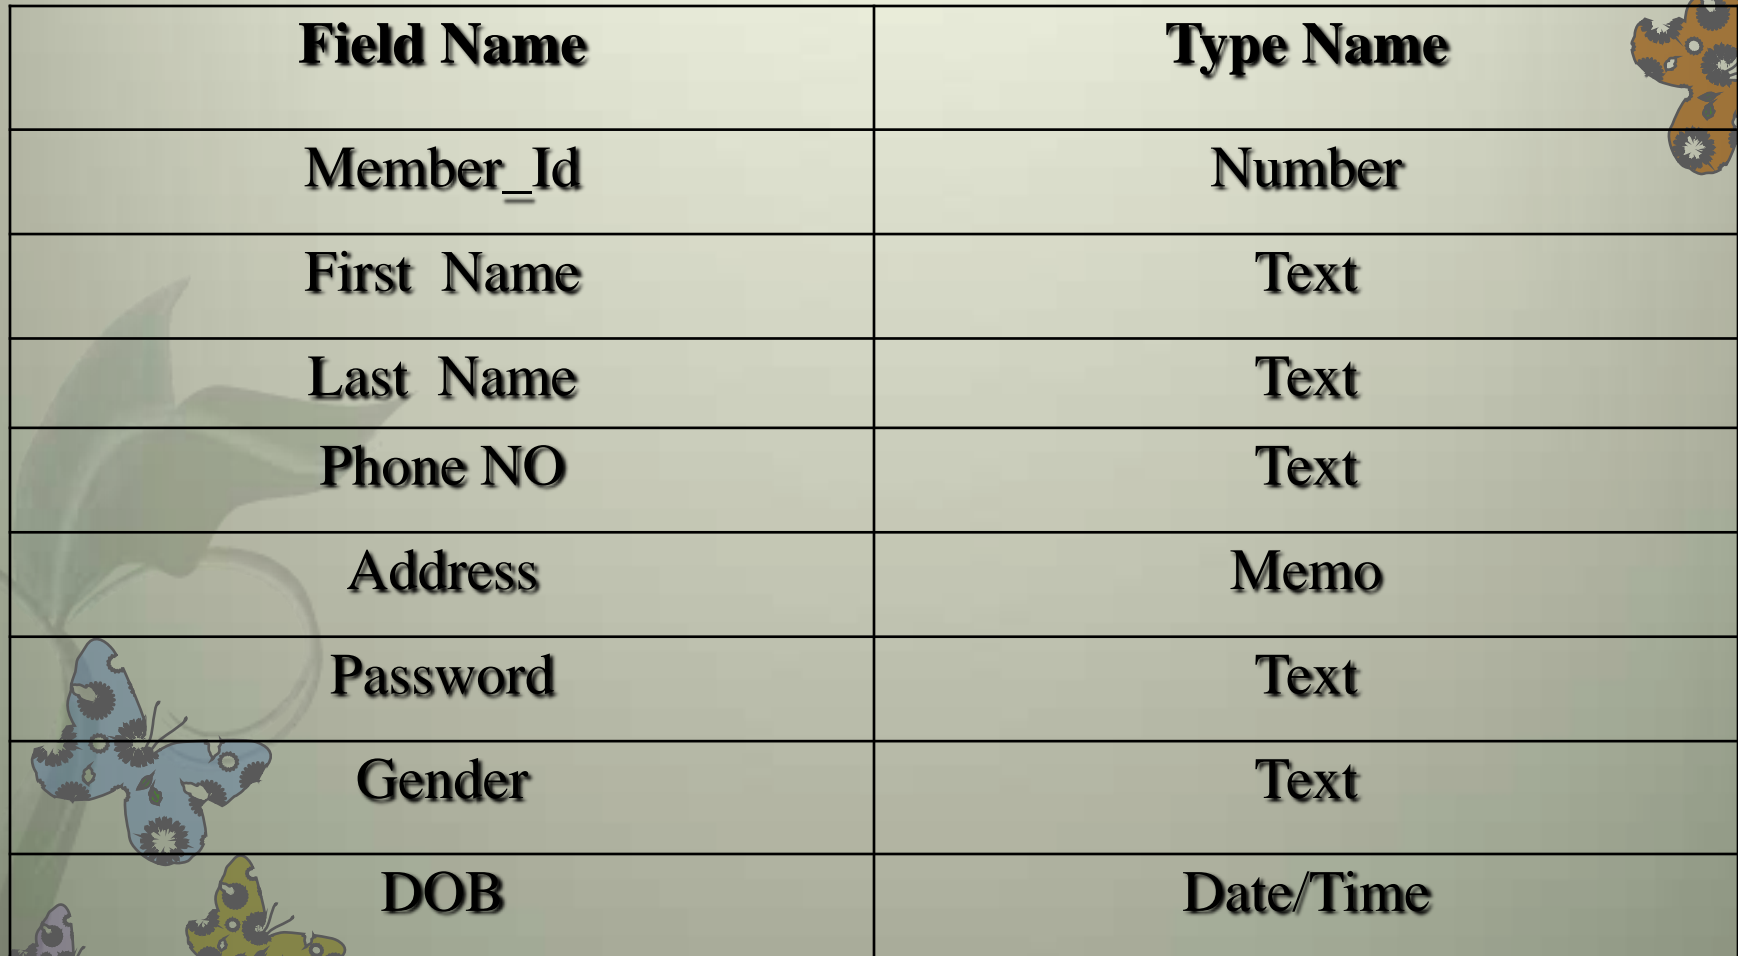

- ❖ INTERFACE : ASP
- ❖ DATABASE : MS ACCESS
- ❖ PLAT FORM : WINDOWS 7

PROJECT OUTCOME

- ✱ To make the existing system more efficient.
- ✱ To provide a user friendly environment where user can be serviced better.
- ✱ Make functioning of library faster.
- ✱ Provide a system where the library staff can catch defaulters and not let them escape.
- ✱ To minimize the loss done to books.

CONCLUSION

The system has been developed using ASP and MS access , the system was able to process and update the database with more ease. It helped in developing a total integrated system.

Thus the project “**LIBRARY MANAGEMENT SYSTEM**” can be altered in accordance with the future requirements of the organization.

thank
you
